Steff Horemans

Data Engineer/Product Owner

steffhoremans@yahoo.com · LinkedIn · GitHub

Languages: Dutch (native), English (fluent)

PROFILE

Data Engineer with 6+ years of experience building data products and a PhD in the life sciences. Specialized in Databricks, I build governed data products end-to-end: from business intake to data pipelines, quality checks, access control and lineage. I am growing towards data and AI architecture.

CORE SKILLS

- **Data platforms & architecture:**
  - Full stack experience on Databricks
  - Supplementary services on Azure: Data Factory, Web Apps, Cosmos DB
- **Software engineering:** Python/PySpark , SQL, CI/CD, Git, Azure DevOps
- **Data analytics and OR/ML model development**
- **Agentic software engineering tools:** multi-model routing (LiteLLM), tracing (Langfuse), coding harness (OpenCode, Claude Code), European AI endpoints (Scaleway, OVHcloud , Mistral)
- **BI:** Tableau, Tableau Prep, Alteryx, MS SQL

EXPERIENCE

Data Engineer — Atlas Copco | Aug 2022 – Present

First 2 years via Exellys (contracting), then permanent employment

- Leads a cross-departmental initiative to identify machines with obsolete parts, aligning 3 departments on one data model with follow-up per domain.
- Chaired the Communities of Practice on application development and code standards, shaping engineering practices across 2 teams.
- Designed and built governed data products on Databricks end to end: Lakeflow Jobs and Asset Bundles as infrastructure-as-code, CI/CD, and metadata, quality checks, access management and lineage in Unity Catalog.
- Delivered data products in daily use: an order-bundling tool that reduced site visits by 10%, operations research models tracked with MLflow, and internal apps on Databricks Apps, Streamlit and Azure.

BI Consultant — Modis (now Akkodis) | Jun 2020 – Jul 2022

- Ran intakes with business users and translated their needs into Tableau dashboards for R&D and real world decision making processes for a pharmaceutical client.
- Managed databases (MS SQL, Azure Data Factory) and built data pipelines with Alteryx and Tableau Prep to make data reportable.

PhD Researcher, Life Sciences — Université Paris-Saclay | Oct 2015 – Dec 2019

- Independently ran a four-year research project in molecular genetics, which was published in BMC Biol (see below)
- Generated and analysed experimental data on the link between DNA replication and metabolism
- Presented at international conferences and mentored master students

OTHER PERSONAL ACHIEVEMENTS

Personal blog on data engineering and AI — *personal project (in development)* · Steff Horemans

Publication: Glycolytic pyruvate kinase moonlighting activities in DNA replication initiation and elongation — BMC Biol.

EDUCATION

- **Postgraduate Applied AI** — Erasmushogeschool Brussel — 2024–2025
- **PhD, Life Sciences** — Université Paris-Saclay — 2015–2019
- **M2 Synthetic Biology** — Université d'Évry-Val-d'Essonne — 2014–2015
- **MSc Biophysics** — KU Leuven — 2012–2014
- **BSc Biochemistry** — KU Leuven — 2009–2012
